06 · Individual Contribution Statement — ReconPilot

Team1010 · MBA ZG583 Management of AI Products

Team name: Team1010 · **Course:** MBA ZG583 Management of AI Products · **Submission date:** 06 November 2026

#	Member	BITS ID
1	Raksha Kalegowda	2025MB26160
2	Nicole Maria Gomes	2025MB26037
3	Gurvinder Kaur	2025MB26010
4	Achal Tiwari	2025MB26002
5	Gokulkrishnan	2025MB26210
6	Thirumanoor Venkata Phani Bhushan	2025MB26070

Evidence used: GitHub history of `krish19098/Reconpilot` (PR #1 authored and merged by `krish19098`, i.e. Gokulkrishnan; later commits made by AI sessions he directed; PR #2 open), the AI session records summarised in 05_AI_Collaboration_Log, and the team concept document *AIProduct_ReconPilot.docx* (lists all six members; does not record individual authorship). Wording marked *Proposed contribution for member confirmation* is inferred from the project's workstreams and is not a verified fact.

---

1. Raksha Kalegowda — 2025MB26160

Role and contributions

Proposed contribution for member confirmation.

- **Role:** Product concept and requirements.
- **Contribution:** problem statement and target-user definition; JTBD for reconciliation analysts and operations managers; PRD review (goals, non-goals, MVP hypothesis); feature prioritisation inputs.
- **Artifacts:** 02 Final Report §2 and §4; Appendix/PRD.
- Team-level activity; individual allocation was not separately recorded.

AI tools and assistance

Verified project-level AI use: Claude Code (cloud sessions working in the repository) and Claude chat were used for product concept refinement and requirement structuring, prototype coding and debugging, the Indian Banking dataset and its evaluation, competitor and strategy research support, documentation, presentation and submission preparation, and review of limitations, risks and evaluation claims (records: 05_AI_Collaboration_Log, repository commits). ChatGPT: not recorded in the project files.

Individual use: individual usage was not separately logged and requires member confirmation. This statement does not claim that this member personally used any specific tool.

Human validation and review

Project-level validation (evidence: AI session records, PR #2, correction commits): prototype screens and reconciliation outputs were reviewed; Indian Banking results and evaluation figures were checked (matching, break classification, root cause, recommendation — including the correction to 5 recommendation misses, 14/19); limitations were identified (currency-agnostic risk thresholds, paise rounding classified as FX rounding); competitor positioning was reviewed and unsupported differentiation claims corrected (Fractal overlap disclosed); security, human-oversight and pilot-readiness limits were reviewed (no authentication, audit log not tamper-proof); AI-generated documents were reviewed and inaccurate claims corrected (e.g. low-confidence wording changed to "suggests INVESTIGATE").

These validation activities were conducted as part of the team project. Individual responsibility for each activity was not separately recorded.

Individual declaration

I confirm that this section is to reflect my actual participation in the project, that AI tools were used only as assistance, and that I am responsible for reviewing and confirming this declaration.

2. Nicole Maria Gomes — 2025MB26037

Role and contributions

Proposed contribution for member confirmation.

- **Role:** Research and competitor analysis.
- **Contribution:** competitor comparison (Duco, SmartStream, Fractal); build vs buy vs partner reasoning; opportunity framing and course case lens.
- **Artifacts:** 02 Final Report §2.5–2.7 and §3; Appendix/Competitors.
- Team-level activity; individual allocation was not separately recorded.

AI tools and assistance

Verified project-level AI use: Claude Code (cloud sessions working in the repository) and Claude chat were used for product concept refinement and requirement structuring, prototype coding and debugging, the Indian Banking dataset and its evaluation, competitor and strategy research support, documentation, presentation and submission preparation, and review of limitations, risks and evaluation claims (records: 05_AI_Collaboration_Log, repository commits). ChatGPT: not recorded in the project files.

Individual use: individual usage was not separately logged and requires member confirmation. This statement does not claim that this member personally used any specific tool.

Human validation and review

Project-level validation (evidence: AI session records, PR #2, correction commits): prototype screens and reconciliation outputs were reviewed; Indian Banking results and evaluation figures were checked (matching, break classification, root cause, recommendation — including the correction to 5 recommendation misses, 14/19); limitations were identified (currency-agnostic risk thresholds, paise rounding classified as FX rounding); competitor positioning was reviewed and unsupported differentiation claims corrected (Fractal overlap disclosed); security, human-oversight and pilot-readiness limits were reviewed (no authentication, audit log not tamper-proof); AI-generated documents were reviewed and inaccurate claims corrected (e.g. low-confidence wording changed to “suggests INVESTIGATE”).

These validation activities were conducted as part of the team project. Individual responsibility for each activity was not separately recorded.

3. Gurvinder Kaur — 2025MB26010

Role and contributions

Proposed contribution for member confirmation.

- **Role:** Dataset and reconciliation evaluation.
- **Contribution:** review of the synthetic scenarios and hand-written answer key; metric definitions; interpretation of Nexora and Indian results and limitations; go/no-go thresholds.
- **Artifacts:** 02 Final Report §7–8; Appendix/Data; Appendix/Metrics.
- Team-level activity; individual allocation was not separately recorded.

AI tools and assistance

Verified project-level AI use: Claude Code (cloud sessions working in the repository) and Claude chat were used for product concept refinement and requirement structuring, prototype coding and debugging, the Indian Banking dataset and its evaluation, competitor and strategy research support, documentation, presentation and submission preparation, and review of limitations, risks and evaluation claims (records: 05_AI_Collaboration_Log, repository commits). ChatGPT: not recorded in the project files.

4. Achal Tiwari — 2025MB26002

Role and contributions

Proposed contribution for member confirmation.

- **Role:** UX, investigation and trust design.
- **Contribution:** investigation workflow and screen review; trust, explainability and uncertainty handling; human-in-the-loop and governance controls.
- **Artifacts:** 02 Final Report §5 and §10; Appendix/Wireframes; Appendix/Risk_Note.
- Team-level activity; individual allocation was not separately recorded.

AI tools and assistance

Verified project-level AI use: Claude Code (cloud sessions working in the repository) and Claude chat were used for product concept refinement and requirement structuring, prototype coding and debugging, the Indian Banking dataset and its evaluation, competitor and strategy research support, documentation, presentation and submission preparation, and review of limitations, risks and evaluation claims (records: 05_AI_Collaboration_Log, repository commits). ChatGPT: not recorded in the project files.

Individual use: individual usage was not separately logged and requires member confirmation. This statement does not claim that this member personally used any specific tool.

Human validation and review

Project-level validation (evidence: AI session records, PR #2, correction commits): prototype screens and reconciliation outputs were reviewed; Indian Banking results and evaluation figures were checked (matching, break classification, root cause, recommendation — including the correction to 5 recommendation misses, 14/19); limitations were identified (currency-agnostic risk thresholds, paise rounding classified as FX rounding); competitor positioning was reviewed and unsupported differentiation claims corrected (Fractal overlap disclosed); security, human-oversight and pilot-readiness limits were reviewed (no authentication, audit log not tamper-proof); AI-generated documents were reviewed and inaccurate claims corrected (e.g. low-confidence wording changed to “suggests INVESTIGATE”).

5. Gokulkrishnan — 2025MB26210

Role and contributions

- **Role:** Product coordination and prototype development lead.
- **Verified:** authored and merged PR #1 “Deploy ReconPilot MVP”; owner of the team repository and Vercel deployment (GitHub history).
- **Verified:** directed the AI-assisted prototype build; specified the Indian Banking dataset requirements, approved the engine changes before implementation and reviewed the results (PR #2, AI session records).
- **Verified:** directed the compliance audit and final submission passes, including keeping PR #2 unmerged and production unchanged during the sprint.
- *Proposed contribution for member confirmation:* product concept development with the team. Team-level activity; individual allocation was not separately recorded.
- **Artifacts:** prototype repository; 04 Prototype README; Indian Banking dataset review; submission review.

AI tools and assistance

Verified project-level AI use: Claude Code (cloud sessions working in the repository) and Claude chat were used for product concept refinement and requirement structuring, prototype coding and debugging, the Indian Banking dataset and its evaluation, competitor and strategy research support, documentation, presentation and submission preparation, and review of limitations, risks and evaluation claims (records: 05_AI_Collaboration_Log, repository commits). ChatGPT: not recorded in the project files.

Individual use (verified): Claude Code and Claude chat in the sessions listed in 05. ChatGPT use was not separately logged and requires member confirmation.

Human validation and review

Project-level validation (evidence: AI session records, PR #2, correction commits): prototype screens and reconciliation outputs were reviewed; Indian Banking results and evaluation figures were checked (matching, break classification, root cause, recommendation — including the correction to 5 recommendation misses, 14/19); limitations were identified (currency-agnostic risk thresholds, paise rounding classified as FX rounding); competitor positioning was reviewed and unsupported differentiation claims corrected (Fractal overlap disclosed); security, human-oversight and pilot-readiness limits were reviewed (no authentication, audit log not tamper-proof); AI-generated documents were reviewed and inaccurate claims corrected (e.g. low-confidence wording changed to “suggests INVESTIGATE”).

Individually verified: approved engine changes before implementation; required regression tests protecting the Nexora results; requested the corrections to the recommendation-miss count and the low-confidence wording; confirmed the team details and the name correction (AI session records). Other activities: These validation activities were conducted as part of the team project. Individual responsibility for each activity was not separately recorded.

Individual declaration

I confirm that this section is to reflect my actual participation in the project, that AI tools were used only as assistance, and that I am responsible for reviewing and confirming this declaration.

6. Thirumanoor Venkata Phani Bhushan — 2025MB26070

Role and contributions

Proposed contribution for member confirmation.

- **Role:** Documentation, presentation, economics and submission coordination.
- **Contribution:** presentation storyline and slide review; business model and ROI assumption review; executive summary review; final package check.
- **Artifacts:** 01 Executive Summary; 03 Presentation Deck; 02 Final Report §9; Appendix/Economics.
- Team-level activity; individual allocation was not separately recorded.

AI tools and assistance

Verified project-level AI use: Claude Code (cloud sessions working in the repository) and Claude chat were used for product concept refinement and requirement structuring, prototype coding and debugging, the Indian Banking dataset and its evaluation, competitor and strategy research support, documentation, presentation and submission preparation, and review of limitations, risks and evaluation claims (records: 05_AI_Collaboration_Log, repository commits). Final declaration

ReconPilot was developed collaboratively by Team1010. AI tools were used as assistance, not as a substitute for human judgement, and AI-generated outputs were reviewed and corrected where appropriate. Contribution descriptions in this statement must reflect each member’s actual participation; each member is responsible for reviewing and confirming their own declaration before submission. The opportunity choice, risk acceptance, launch recommendation, monetisation judgement and governance claims are the team’s own decisions.
